Power Management

Most organizations support deployments that include a variety of form factors including PC, Mac, iOS, Windows, and Android devices with users who work from the office, home, on the road, and in transit. Let's face it – the standard has become whatever the user needs to perform their work efficiently and well.

For most IT administrators, this means towing the line between operating systems – flipping from one set of applications to another depending on the device, the desired action, and the user profile.

Absolute® Manage can turn this painful reality into a set of simple, automated processes using technology that will allow you to manage PC, Mac, iOS, Windows, and Android devices from a single console.

Cross-Platform Technology

Absolute Manage technology delivers authentic cross-platform capabilities. This means there is no need to invest in additional infrastructure. Instead, existing Mac or Windows servers and hardware components can be leveraged to manage either platform (or both). These cross-platform capabilities extend to IT administrators who can manage PC, Mac, iOS, Windows, and Android devices from a Mac or a PC, based upon their preference – for a single, consolidated skill set across the team.

Intelligent
Track installed applications and licenses, and redeploy underused licenses to maximize your inventory and avoid non-compliance fines. Find, terminate, and remove unlicensed and unauthorized software.

Automated
Efficiently manage all of your assets by automating time-consuming IT processes such as software distribution, patch management, asset inventory and imaging.

Cross-Platform
Enjoy ease of use and cross-platform capabilities using a single console to manage all PC, Mac, iOS, Windows, and Android devices in your deployment.

Application & License Management
Track and manage installed applications and licenses on all the devices in your deployment:

- Load balance and minimize bandwidth usage
- Detect missing applications and remotely install them
- Repackage software installations and deploy in PKG and DMG formats
- Monitor usage, redeploy under-used applications, and prevent the launch of applications that exceed licensing
- Track installed apps on iOS and Android devices and use the AbsoluteApps component to securely host, remotely deploy, and distribute in-house applications
- Find, terminate, and remove unlicensed and unauthorized software

Security, Change & Configuration Management
Monitor and enforce your configuration policies and use the data to:

- Remotely filter and group systems and configurations based on OS and business function
- Restart, shut down, or put remote computers to sleep
- Execute files or scripts
- Manage corporate and government regulations
- Impose enterprise level security for iOS and Android devices (manage passwords, lock a device, wipe it clean to factory standards)
- Manage and deploy iOS device profiles (configure email, restrict apps, set up VPN, disable cameras, deploy web clips)
- Send messages to iOS and Android device users wirelessly and avoid SMS messaging costs

Absolute®
MANAGE

Automated Patch Management

Don't rely on end users to prevent viruses, worms, and other security threats from entering your network. Now you can:

- Centrally manage and install patches, tracking and reporting on the patch status of all managed Mac and PC systems
- Once a basic OS is installed, all required updates and patches for the Mac or PC will be automatically added

Computer Imaging

- Use an automated process to install a complete operating system and standard applications on Mac & PC devices
- Deploy a disk image to a Mac while it's in use
- Automatically migrate user folders, network settings, and Directory Access settings so that upon reboot, users will find a new Mac OS with no interruption to productivity

Asset Inventory

- Gather hundreds of hardware and software data points from PC and Mac devices over the network
- Collect detailed information from iOS and Android devices, such as: serial numbers, MAC addresses, installed apps, and telephone numbers
- Export data into various file formats
- Integrate asset information into third party applications such as Microsoft SCCM and Web Help Desk

Power Management

Implementing an energy savings policy will improve your bottom line and conserve the planet's resources:

- Build policies based on user behaviour and work schedules
- Assign defaults so the most energy efficient profile is enforced for maximum savings
- Analyze the data to determine your savings and to plan for greater efficiencies in the future

Absolute Manage Mobile Device Management

Mobile device management is included with Absolute Manage. Or it can be purchased as a stand alone product (Absolute Manage MDM). Visit www.absolute.com/mdm for more information.

Absolute® MANAGE

"Absolute Manage has been an invaluable tool for enhancing our efficiency. It simplifies our daily management tasks, lets us to stay one step ahead when it comes to patch management and is critical in allowing us to maintain a lean IT staff without compromising the quality of our service."

Michael Scarpelli
Technical Support Manager
La Jolla Institute for Allergy & Immunology (LIAI)

System Requirements

Server – Windows
- **Absolute Manage:** Windows® XP SP 2 or newer[†]
- **MDM:** Windows Server 2003 or 2008, Microsoft Internet Information Services (IIS) 6.0 or newer, ASP. NET 2.0, .NET 3.5

Server – Mac
- **Absolute Manage:** Mac® OS X 10.5 or newer[‡]
- **MDM:** Mac OS X 10.5 or newer; Property List Editor utility (optional installation package included with Mac OS X developer software)

Admin Console – Windows
- Windows XP SP2 or newer

Admin Console – Mac
- Mac OS X 10.5 or newer, Intel processor

Agent – Windows
- Windows XP or newer[†]

Agent – Mac
- Mac® OS X 10.3.9 or newer[‡]
- Mac® OS X 10.2-10.3.8 (supported with specific Agent versions)

Mobile Client Platforms
- iOS 4.0 or newer; Android 2.2 or newer; Windows 7 or newer

[†] including Windows® 2008 Server & Windows 7®
[‡] including Mac® OS X 10.7 Lion™
